FOOD CONSUMPTION, PRICES, AND EXPENDITURES. Allen O. Johnson, agricultural economist, National Economics Division, Economics, Statistics, and Cooperatives Service, U.S. Department of Agriculture. Agricultural Economic Report 138, 1977 Supplement.

ABSTRACT

Food consumption data for all major food groups and many individual fresh and processed food items are reported for 1960 through 1977. Nutrient intake, retail prices, and expenditures for food also are included. Total food consumption was remarkably stable during the 1960-77 period, but substantial changes occurred for individual items. Average per capita food consumption has been nutritionally adequate. Food prices and expenditures more than doubled in 1960-77.

Keywords: Food consumption; Nutrients; Retail prices; Farm prices; Expenditures.

ACKNOWLEDGMENTS

This report represents the combined efforts of many people. Commodity specialists and their staffs in the Commodity Economics Division of the Economics, Statistics, and Cooperatives Service, provided the basic supply, utilization, and per capita consumption data for most agricultural products. Similar data for fishery products were provided by the National Marine Fisheries Service, U.S. Department of Commerce. The annual nutritive value data were computed by the Consumer and Food Economics Institute, Science and Education Administration, U.S. Department of Agriculture.

The report was developed under the supervision of Allen O. Johnson, Food Economics, National Economics Division. Helen Cadena compiled the food consumption estimates, and Debbie Thornsburry assisted in preparation of the report. Bonita Moore edited tables, while Neal Holland Duncan edited the text.

REVISED CONSUMPTION INDEX

The index of per capita food consumption was revised in 1978 to show a more current price reference period. The base year 1967 remained the same. The price reference period in this report is 1967-69. Previously, 1957-59 retail prices were used to weight or combine food consumption for individual items. The new and the old index was linked at 1965. Prior years were adjusted by the relative difference between the new and the old 1965 indexes.

The effect on the index of total food consumption was small, as most prices rose from 1957-59 to 1967-69. Crop and animal product indexes were slightly smaller for recent years, on the new basis. The new index for vegetable fats and oils showed larger gains than the old one. Shortening and other edible oil prices were valued substantially higher during 1967-69 than during 1957-59. The potato index was lower because prices of frozen potato products were lower in the recent base period.

Supplement for 1977 to

FOOD CONSUMPTION, PRICES, AND EXPENDITURES

Allen O. Johnson

INTRODUCTION

This supplement revises and updates through 1977 the statistical information contained in the July 1968 issue of Food Consumption, Prices, and Expenditures. 1/ Data are reported as of November 1978. 2/

This report's updated tables contain the same numbers as in the original 1968 bulletin. Some tables have been omitted for lack of new information.

Table footnotes are reasonably complete but omit the detailed source notes carried in the original 1968 tables. A complete description of data sources and methodology pertaining to per capita food consumption estimates appeared in the June 1965 issue of U.S. Food Consumption, Sources of Data and Trends, 1909-63, SB-364.

Most of the report's consumption, supply, and utilization data are benchmarked from information gleaned from the census of agriculture and census of manufacturers and business. Thus, quantity data are subject to revision as more comprehensive data become available. Personal consumption food expenditure data, periodically revised, are from the Commerce Department's National Income Accounts. The Bureau of Labor Statistics' price data are regarded as final.

HIGHLIGHTS

Food consumption has changed significantly in the past 18 years. Preferences for individual food commodities have changed, while total food consumption has remained relatively stable (at about 1,430 pounds per person during 1960-77).

Domestic civilian consumption of food derived from animals has continued at about 640 pounds per person for the last 18 years. However, within the animal product complex, significant patterns have developed. Beef and veal consumption, on a retail weight basis, has risen from 69.5 pounds in 1960 to 96.4 pounds per person in 1977. This trend is the result of financially improved lifestyles and the cattle industry's ability to produce increasing quantities of beef. Pork consumption declined from 60.3 pounds per person in 1970 to 56.7 pounds in 1977, despite the transition to leaner pork.

1/ A single free copy of Food Consumption, Prices, and Expenditures is available from ESCS Publications, Room 0054-South, U.S. Department of Agriculture, Washington, D.C., 20250. Indicate your zip code.

2/ Recent data on per capita food consumption, income, food expenditures, and prices were published in the Winter 1979 issue of the National Food Review.

Poultry's popularity continues. Chicken and turkey consumption increased from 34.0 pounds in 1960 to 54.1 pounds in 1977 partly in response to lower relative prices based on new cost-reducing production technologies. Increased awareness of less fat in one's diet and fast food restaurant expansion have also reinforced poultry's position. Fish consumption has increased nearly 24 percent since 1960.

Egg consumption, however, has declined 18 percent since 1960. Changing breakfast habits and increased concern over cholesterol intake have been the contributing factors.

Dairy product consumption has exhibited a mixed picture. Fluid milk and cream use declined about 10 percent in the past 18 years; however, cheese consumption nearly doubled.

Fats and oils use rose 20 percent during the last decade. Fats of animal origin declined in use, while consumption of vegetable fats increased.

Total vegetable intake has experienced an 18-year rise. Declines in fresh vegetable consumption were more than offset by gains in canned and frozen vegetable use. Total fruit consumption expanded, as use of fresh fruit declined and that of processed fruit gained. Frozen orange juice consumption increased 73 percent during 1970-77.

The caloric and nutrient content of the 1977 food supply generally was higher than in 1960. Larger quantities of phosphorous, iron, magnesium, thiamine, riboflavin, Vitamin B₆, Vitamin B₁₂, ascorbic acid, protein, carbohydrates, and fats are being consumed. Slightly less calcium and Vitamin A were consumed in 1977. Data indicate that, generally the U.S. population is well fed.

Retail food prices increased 118 percent from 1960 to 1977. Prices of food purchased for at-home consumption were 112 percent higher and prices of food consumed away from home rose 146 percent. Changing lifestyles and greater affluence have increased the demand for convenience food.

Grocery store prices for foods consumed at home during 1960-77 can be examined by commodity groups. Prices of nonfarm foods, such as imported items and fish, increased most. Prices for fats and oils, fruits and vegetables, and cereal and bakery products more than doubled because of continued consumer preference for more convenience foods in the last 18 years. Red meat and dairy product prices rose nearly 100 percent, while poultry meat and egg prices increased the least--slightly less than 50 percent.

The retail cost of domestically produced foods rose 95 percent from 1960 to 1977. Farm prices generally kept pace, as farm value rose 89 percent. The farm-retail spread, a measure of processing and marketing changes, increased 97 percent during 1960-77. Production and marketing costs also rose significantly.

Consumer ability to pay higher prices increased as total disposable personal income rose 270 percent from 1960 to 1977, partly because of population growth, up 20 percent.

1/ Quantities of individual foods on a retail weight basis are combined into indexes using 1967-69 average prices beginning in 1965. Prior years based on 1957-59 retail prices with indexes linked at 1965. 2/ Includes edible offals and all pork. 3/ Data for melons, fresh vegetables, potatoes and sweet potatoes, and dry beans and peas include consumption from home garden produce. 4/ Preliminary. 5/ Corn sugar and sirup are with sugars and other sweeteners. 6/ Excludes sugar used in production of canned and frozen fruits, canned fruit juices, canned vegetables, and unskinned sweetened condensed milk.

1/ Quantities of individual foods on a retail weight basis are combined into indexes using 1967-69 average prices beginning in 1965. Prior years based on 1957-59 retail prices with indexes linked at 1965. 2/ Includes edible offals and all pork. 3/ Data for melons, fresh vegetables, potatoes and sweet potatoes, and dry beans and peas include consumption from home garden produce. 4/ Preliminary. 5/ Corn sugar and sirup are with sugars and other sweeteners. 6/ Excludes sugar used in production of canned and frozen fruits, canned fruit juices, canned vegetables, and unskimmed sweetened condensed milk.

-- = Not available.

1/ Retail weight equivalent.

2/ Value aggregates derived by multiplying quantities of individual foods by retail prices.

3/ Consumption for 1967.

4/ Excludes quantities used in other dairy products.

5/ Weighted average of processed and nonprocessed products.

6/ Less than 0.05 percent.

Table 4--Per capita food consumption by selected food groups, and annual 1967 and 1977 1/

								Animal	Vegetable	Total

1/ Retail weight data are taken from tables 8-31. Final consumer products from a combination of primary food groups, such as bakery products, are measured and reported in the form of their primary ingredients, such as flour, shortening, and eggs. Civilian consumption only. 2/ Includes game and edible offal. 3/ Includes game fish. 4/ Includes product weight of butter and margarine; other items in terms of fat content. 5/ Preliminary. 6/ Includes consumption of home garden produce. 7/ Data have been revised to reflect conversion from fresh weight equivalent to processed weight for dehydrated potatoes, potato chips and shoe strings. 8/ Soya products approximated. 9/ Corn sugar and sirups are with sugars and other sweeteners. 10/ Excludes sugar used in production of canned and frozen fruits, canned fruit juices, canned vegetables, and unskimmed sweetened condensed milk. 11/ Includes spices and herbs from table 31. 12/ Includes fruits and vegetables used in soups and baby foods.

1/ These factors were based on information from various sources. These factors were first assembled during World War II. Later, they were published in Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products. Current revisions were based on special industry surveys and appraisals by commodity specialists.

2/ The points in the marketing system at which primary data are obtained.

3/ Unless otherwise noted, a straight-line interpolation was made for the 9-year intervening period.

4/ Early factor used through 1953, later factor used in 1963 and thereafter; interpolation made for 1954-62.

5/ Beginning in 1960 factor for both lean and fat cuts combined was revised to 0.78 and increased by a straight line interpolation to 0.92 in 1976 and beyond.

6/ Ready-to-cook derived from liveweight using a factor of 0.68 prior to 1947; thereafter it was increased gradually to 0.72 in 1958 and beyond.

7/ Ready-to-cook derived from liveweight using a factor of 0.75 prior to 1956 and 0.76 for 1956 and 1957; thereafter it was increased 1 percentage point per year until 0.80 was reached in 1961.

8/ Factor of 0.96 used in 1942-46 to cover additional loss resulting from shortage of wooden cases during the war period.

9/ Includes fats and oils in cooking and salad oils, in salad dressings, mayonnaise, in bakery products, and for minor uses such as fish canning. To avoid duplication with other foods, no attempt was made to put data on actual weight basis.

10/ Roasted.

11/ Factor of 0.278 used through 1961, 0.303 used for 1962, 0.333 used for 1963 and beyond.

12/ Chocolate liquor equivalent of cocoa and chocolate (53 percent fat content). Prior to 1925 a factor of 0.737 was used.

13/ Factor raised 0.01 point per year beginning with 1961 and reaching 1.00 in 1965 to allow for change of imports from stem to box basis.

1/ Civilian consumption. Includes processed meats on a fresh basis. Carcass weight converted to retail weight equivalent using factors indicated in table 7.

2/ Approximately at wholesale level of distribution.

3/ Approximation of game birds and mammals and commercially raised rabbits.

4/ Net canned weight; federally inspected only; excludes soups. Canned meat is included in total skeletal meat.

5/ Preliminary.

1966	.2	1.3																

- 1/ Civilian consumption.
- 2/ Based primarily on information from Government-regulated fluid milk markets.
- 3/ Includes buttermilk and all low-fat fluid items, including quantities used in flavored drinks.
- 4/ Includes cream in terms of whole milk equivalent, farm weight for farm consumption, distribution weight for nonfarm.
- 5/ Includes quantities used in other dairy products.
- 6/ Excludes pot and bakers' cheese.
- 7/ Includes evaporated and condensed buttermilk.
- 8/ Preliminary.
- 9/ Includes only the dairy component of frozen desserts and excludes nonfat dry milk used in dairy products other than frozen desserts.
- 10/ Excludes butter. The inclusion of butter would add 0.5 to 1.5 quarts.

Table 12--Food fats and oils: Per capita consumption, 1960-77 1/

[illegible]

NA = Not available.

1/ Civilian consumption.

2/ Excludes use in margarine, shortening, and nonfood products.

3/ Estimated from data on production of item.

4/ Computed as a residual. Includes small quantities used for miscellaneous commercial food products.

5/ Table spreads and cooking fats plus oil content of other edible fats and oils.

6/ Preliminary.

1/ Calendar year except for citrus fruits for which season starts October or November prior to year indicated. Civilian consumption. Conversion factors used to derive retail weights from farm weights are indicated in table 7. 2/ Farm and retail. 3/ Preliminary. 4/ Farm weight data include only apples from commercial areas sold and used in farm households. Retail weight data include all apples. 5/ Loss factor reduced from 5 percent to zero over 1960-65 period to allow for change from stem to box basis of imports. 6/ Less than 0.05.

1/ Excludes quantities produced in home gardens. Retail weight derived from farm weight using factors indicated in table 7.

2/ Farm and retail.

3/ Included in minor vegetables.

4/ Preliminary.

5/ Close trim basis.

6/ Less than 0.05 pound.

7/ Shallots less than 0.05 pound.

8/ Includes farm weight of dehydrated onions.

1/ Civilian consumption. Excludes soups, baby foods, canned dry beans and pea products.

2/ Beginning 1968, catsup and chili sauce and pastes and sauce not reported separately.

3/ Tomato juice content is about 94 percent of the total.

4/ Preliminary.

5/ Minor vegetables and items for which data are not shown separately are derived as a residual and included in "other" vegetables.

6/ Computed as a residual minus the items in the green and yellow group (see footnote 2).

7/ Series revised April 1976.

1/ Civilian consumption. Calendar year basis except for dry field peas for which the year begins in September of the year indicated. Data exclude home-garden produce. Factors used to convert from farm weight to retail weight are indicated in table 7.

2/ Preliminary.

3/ Includes processed sweetpotatoes other than canned.

4/ Cleaned basis.

5/ Approximations.

1/ Consumption of most items is measured at the processing level. Excludes quantities used in alcoholic beverages. Civilian consumption. 2/ Semolina and durum flour in products such as macaroni, spaghetti, and noodles. 3/ Estimated on basis of data in Census of Manufacturers plus allowance for grind for farm home use. 4/ Milled basis. Rice consumption for year beginning August previous to year stated. 5/ Less than 0.05 pounds. 6/ Data no longer available. 7/ Preliminary. 8/ See table 28 for data on corn sugar and corn sirup. 9/ Based on census data. In recent years, approximately 50 percent of cornmeal was degermed. 10/ Principally oatmeal but includes an allowance for ready-to-eat oat cereals and infant foods. 11/ Barley food products expressed in terms of malt equivalent. Includes malt and pearl barley.

1/ Data on U.S. confectionery shipments, compiled from "Products and Product Classes-Quantity and Value of Shipments by all Producers" (including confectionery and chocolate-type confectionery for retail sale by chocolate manufacturers) reported in the 1958, 1963, 1967, and 1972 Census of Manufacturers, "Sugar and Confectionery Products." SIC Industry Groups 2065 and 2066, MC-20F series, published infrequently by U.S. Dept. of Commerce, Bureau of the Census, Washington, D.C. Data for noncensus years keyed to trend of confectionery shipments reported in "Confectionery Shipments, Sales Average Value and Per Capita Consumption, 1927-76," Confectionery Manufacturers' (Annual) Sales and Distribution (Surveys) 1977, U.S. Dept. of Commerce, Domestic and International Business Administration, Washington, D.C., June 1978. 2/ Data from U.S. Dept. of Commerce, U.S. Imports, FT-246, Statistical Classes, 156.3020, 157.1020, and 157.1040. 3/ Data from U.S. Dept. of Commerce, U.S. Exports, FT-410, Statistical Classes, 062.0015 and 073.0020. 4/ Calculated as a residual. Negatives indicate increases in stock level during year, positives signify net withdrawals. 5/ Domestic disappearance for food use. 6/ Quantity estimated by ESCS, based on data from Fruit and Vegetables Division, AMS, U.S. Dept. of Agriculture. 7/ Unit value times total use. 8/ Calculated from "Total Consumption of Selected Ingredients by the U.S. Confectionery Industry," reported annually in Confectionery Manufacturers' (Annual) Sales and Distribution (Survey), U.S. Dept. of Commerce, Domestic and International Business Administration, Washington, D.C. 9/ Preliminary.

1977 <u>4/</u>	.46	.07	.30	.52	.03	.34	1.7	.50	6.4

1/ Crop year beginning July of year indicated for tree nuts; peanuts on September-August year. Civilian consumption of peanuts and tree nuts.

2/ Includes Brazil, pignolia, pistache, chestnuts, cashews, and total domestic consumption of miscellaneous tree nuts.

3/ Based on imports beginning July of the year indicated.

4/ Preliminary.

1977 <u>4/</u>	.3	.4	.8	1.5

1/ Based upon imports for consumption, adjusted for exports of foreign unground pepper, minus domestic exports and shipments to territories of unground pepper, when reported.

2/ Based upon imports for consumption plus the production of the preceding year, adjusted for seed for planting. Data estimated beginning 1964.

3/ Based upon imports for consumption and production of dried chili peppers (capsicum) in California.

4/ Preliminary.

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

Table 38--Nutrients available for daily per capita consumption, 1909-77 1/

Year	Food energy	Protein	Fat	Carbo- hydrate	Calcium	Phos- phorus	Iron	Magne- sium	Vitamin A value	Thiamin	Ribo- flavin	Niacin	Vitamin B6	Vitamin B12	Ascorbic acid
	Calories	Grams			Milligrams			Int'l. units	Milligrams			Micro- grams		Milli- grams

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

Table 38--Nutrients available for daily per capita consumption, 1909-77 1/

Year	Food energy	Protein	Fat	Carbo- hydrate	Calcium	Phos- phorus	Iron	Magne- sium	Vitamin A value	Thiamin	Ribo- flavin	Niacin	Vitamin B6	Vitamin B12	Ascorbic acid
	Calories	Grams			Milligrams			Int'l. units	Milligrams			Micro- grams		Milli- grams

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

Table 38--Nutrients available for daily per capita consumption, 1909-77 1/

Year	Food energy	Protein	Fat	Carbo- hydrate	Calcium	Phos- phorus	Iron	Magne- sium	Vitamin A value	Thiamin	Ribo- flavin	Niacin	Vitamin B6	Vitamin B12	Ascorbic acid
	Calories	Grams			Milligrams			Int'l. units	Milligrams			Micro- grams		Milli- grams

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

Table 38--Nutrients available for daily per capita consumption, 1909-77 1/

Year	Food energy	Protein	Fat	Carbo- hydrate	Calcium	Phos- phorus	Iron	Magne- sium	Vitamin A value	Thiamin	Ribo- flavin	Niacin	Vitamin B6	Vitamin B12	Ascorbic acid

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

Table 38--Nutrients available for daily per capita consumption, 1909-77 1/

Year	Food energy	Protein	Fat	Carbo- hydrate	Calcium	Phos- phorus	Iron	Magne- sium	Vitamin A value	Thiamin	Ribo- flavin	Niacin	Vitamin B6	Vitamin B12	Ascorbic acid
	Calories	Grams			Milligrams			Int'l. units	Milligrams			Micro- grams		Milli- grams

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

Table 38--Nutrients available for daily per capita consumption, 1909-77 1/

Year	Food energy	Protein	Fat	Carbo- hydrate	Calcium	Phos- phorus	Iron	Magne- sium	Vitamin A value	Thiamin	Ribo- flavin	Niacin	Vitamin B6	Vitamin B12	Ascorbic acid
	Calories	Grams			Milligrams			Int'l. units	Milligrams			Micro- grams		Milli- grams

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

Table 38--Nutrients available for daily per capita consumption, 1909-77 1/

Year	Food energy	Protein	Fat	Carbo- hydrate	Calcium	Phos- phorus	Iron	Magne- sium	Vitamin A value	Thiamin	Ribo- flavin	Niacin	Vitamin B6	Vitamin B12	Ascorbic acid
	Calories	Grams			Milligrams			Int'l. units	Milligrams			Micro- grams		Milli- grams

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

Table 38--Nutrients available for daily per capita consumption, 1909-77 1/

Year	Food energy	Protein	Fat	Carbo- hydrate	Calcium	Phos- phorus	Iron	Magne- sium	Vitamin A value	Thiamin	Ribo- flavin	Niacin	Vitamin B6	Vitamin B12	Ascorbic acid
	Calories	Grams			Milligrams			Int'l. units	Milligrams			Micro- grams		Milli- grams

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1960-66 were estimated in part by Consumer and Food Economics Institute. Data reflect revised potato series 1956 to present.

2/ Preliminary.

1/ INCLUDES MERCHANTABLE STOCKS IN HANDS OF GROWERS AND LOCAL DEALERS IN AREAS WHERE PRODUCED PLUS ESTIMATED FARM USE AND SHRINKAGE AFTER JANUARY 1. 2/ INCLUDES THE FARM-WEIGHT EQUIVALENT OF DEHYDRATED POTATOES. 3/ FARM-WEIGHT EQUIVALENT. INCLUDES POTATOES IN SOUPS AND STEWS BEGINNING 1971. 4/ INCLUDES QUANTITIES USED FOR STARCH, GLUCOSE AND ALCOHOL. 5/ DATA INCLUDE THE FARM-WEIGHT EQUIVALENT OF DEHYDRATED POTATOES AND POTATO FLOUR. 6/ INCLUDES FARM-WEIGHT EQUIVALENT OF POTATOES USED IN MIXTURES, FLOUR, DEHYDRATION, CHIPS AND SHOESTRING POTATOES. IN RECENT YEARS THESE USES HAVE AMOUNTED TO ABOUT 21 PERCENT OF THE TOTALS SHOWN. 7/ PRODUCTION INCLUDES SOME QUANTITIES LEFT IN THE GROUND BECAUSE OF LOW PRICE. THESE QUANTITIES ARE INCLUDED IN "FEED, SEED, WASTE, AND NONFOOD". 8/ PRELIMINARY.

1/ The market basket contains the average quantities of U.S. farm-originated food products purchased annually per household in 1972-1974 by all urban consumers. The farm value is the return to farmer for the farm products equivalent to foods in the market basket. The farm-retail spread is the difference between the retail cost and farm value. 2/ Preliminary.

^{1/} Expenditures represent the market value to consumers of all domestic farm foods bought by civilian consumers in this country. Farm value is adjusted to eliminated imputed value of nonfood byproducts. The marketing bill is the difference between the farm value and expenditures. Data for 1947-59 are published in MTS-174, Aug. 1969.

^{2/} Preliminary. Commodity groups may not add to totals due to rounding.

^{3/} Farm value of bakery products group includes farm values of flour, milk, eggs, fruit, lard, vegetable shortenening, and sugar used in bakery products. Farm values of these ingredients are not included in farm values of other product groups.

1/ Reflects revisions based on the 1970 Census of Population. Not adjusted for underenumeration. In computing per capita food consumption on a calendar-year basis, July 1 population was used. Military takings were deducted from total domestic consumption for most commodities and per capita figures were computed using the civilian population.
